

This map displays the spatial distribution of PCB concentrations and the white population in the Detroit metropolitan area. The map is divided into two main regions: a central urban area and surrounding suburban/rural areas. The central urban area is characterized by high PCB concentrations (red and orange) and a high white population (diagonal lines). The surrounding areas show lower PCB concentrations (green and yellow) and a lower white population (dotted pattern). A red outline indicates the location of the General Electric Plant. The map includes a legend for both PCB Concentration (ppm) and White Population.

Legend

General Electric Plant

PCB Concentration (ppm)

- 0 - 0.5
- 0.5 - 1
- 1-5
- 5-12

White Population

- 0 - 1000
- 1001 - 2000
- 2001 - 6000

A horizontal number line representing distance in miles. It starts at 0 on the left and ends at 3.5 Miles on the right. There are four tick marks between 0 and 3.5, dividing the segment into five equal parts. The second tick mark is labeled 1.75.
